PROFESSIONAL SUMMARY

Senior Power BI Developer with 7+ years delivering enterprise BI and reporting solutions across Insurance, Banking, and Energy. Currently at PwC India, owning or contributing to 17 Power BI dashboards across Claims, Sales, HR, Underwriting, New Business, and more - replacing manual, manipulable reporting with governed, source-validated dashboards and leading a team of 4 developers. Previously at TCS (Citi account), built dashboards that made reporting and tracking at least 50% faster across 40+ concurrent projects by replacing manual, inefficient tracking. Deep hands-on expertise across the full Power BI stack - DAX, Power Query, semantic modelling, RLS, Power BI Service administration, and refresh automation via REST APIs and data pipelines.

KEY ACHIEVEMENTS

- **Eliminated manual, manipulable reporting (PwC):** Replaced manual, spreadsheet-based reporting, previously prone to number manipulation with governed Power BI dashboards, increasing transparency and removing the ability to alter reported figures, while cutting manual reporting effort and turnaround time.
- **50%+ faster reporting & tracking (TCS - Citi):** Replaced manual, inefficient reporting and tracking across 40+ concurrent projects with automated Power BI dashboards, making reporting and tracking at least 50% faster.
- **Automated near-real-time refresh:** Configured 15-minute dataset refreshes using REST API integration and pipeline automation, cutting refresh-related incidents by ~20% and removing the need for manual refresh intervention.
- **Team leadership & delivery scale:** Lead a team of 4 Power BI developers while owning or contributing to 17 production dashboards across Claims, Sales, HR, Underwriting, New Business, and more (full list under Experience).
- **Platform governance ownership (PwC):** Established Power BI Service governance from scratch - workspace naming convention and creation strategy, workspace role/access matrix, AD-group permission model, and a structured Dev - UAT - Prod deployment pipeline.

CORE SKILLS

- **Power BI:** Power BI Desktop, Power BI Service, Power BI Apps, dashboard/report development, mobile-optimized report design, KPI reporting, drill-throughs, bookmarks, tooltips, conditional formatting
- **DAX & Power Query:** DAX measures, calculated columns, time intelligence, KPI calculations, data transformation, data cleaning
- **Data Modelling:** Semantic models, star/snowflake schema, dimensional modelling, fact/dimension tables, relationships
- **SQL & Data Platforms:** SQL, BigQuery, data validation, data reconciliation, dashboard testing
- **Service & Administration:** Workspaces, semantic model & report deployment, Apps, permissions, AD groups, RLS, scheduled refresh, refresh monitoring
- **Delivery & Automation:** Requirements gathering, stakeholder management, testing, release coordination, production support, performance optimization, APIs, notebooks, data pipelines, selective refresh, JIRA, Agile

PROFESSIONAL EXPERIENCE

Senior Associate - Power BI Developer | PwC India - Gurugram *Jan 2026 – Present*

- Owned or contributed to **17 Power BI dashboards** used by **100+ stakeholders**: Claims (Retail, Group, PMJJBY), RCU, Sales, HR, NPS, IT Ticketing, Billing & Collection, Cost of Bad Hire, MDM, Data Quality, Near Real-Time Sales (incl. mobile view design), Movement in Inforce Book, Underwriting, New Business, and Industry Benchmarking.
- Lead Power BI delivery with a team of 4 developers, coordinating requirements, development, testing, deployment, and issue resolution while remaining hands-on across dashboard builds.
- Partner directly with business stakeholders to define KPIs and translate business processes into Power BI reporting solutions, increasing transparency across Insurance operations.
- Established Power BI Service governance end-to-end designed the workspace naming convention and creation strategy, built the workspace role/access matrix, and proposed the AD-group-based permission model adopted across the team.
- Designed and implemented a structured **Dev → UAT → Prod deployment pipeline**: Dev restricted to developers and internal PwC testers, UAT opened to client testers with feedback consolidated and cycled back through Dev for fixes and retesting until sign-off, Prod restricted to end users only.

- Cut duplicate DAX logic across dashboards by **25%** by designing shared semantic models with reusable measures for operational KPIs, ageing, trends, and movement analysis.
- Improved production reliability, catching and resolving **20+ data-quality issues per release cycle**, through systematic BigQuery/SQL source-to-report validation and reconciliation.
- Reduced refresh-related incidents by **20%** by automating refresh monitoring via APIs, notebooks, and data pipelines.
- Cut report load time by **30%** by minimizing front-end transformations and optimizing the semantic model offloading logic to the backend and reducing calculated-column reliance.
- Replaced manual, spreadsheet-based reporting previously susceptible to number manipulation with centralized, source-validated dashboards, increasing transparency, reducing manual effort, and closing the gap for unauthorized figure changes.

IT Analyst - Power BI Developer | TCS (Citi Account) - Gurugram *Feb 2022 – Jan 2026*

- Built and maintained Power BI reporting for Citi's Vulnerability Assessment - Safety & Soundness (VA S&S) function, covering assessment schedules, issues, remediation tracking, and operational reporting.
- Developed the Vulnerability Assessment Issue Tracking Dashboard, consolidating assessment schedules, issues, due dates, CAPs, Risk Exceptions, and Production Change Verification into **one governed source of truth**.
- Replaced manual, inefficient tracking across **40+ concurrent projects** with automated Power BI dashboards, making reporting and tracking **at least 50% faster**.
- Developed DAX measures for ageing and due-date analysis with drill-throughs and conditional formatting, segmented by domain, SPOC, JIRA assignee, and issue status.
- Used SQL and BigQuery for data preparation and validation, reconciling Power BI outputs against source data to ensure accuracy across tracking that was previously manual and error-prone.
- Implemented RLS and AD-group-based access across **9+ AD stakeholder groups**, and managed Service publishing, permissions, and refresh monitoring.
- Configured 15-minute dataset refreshes using REST API integration and pipeline automation, removing the need for manual refresh monitoring.
- Reviewed DAX, data models, and report design for optimization opportunities, partnering with business and technical stakeholders on enhancements and releases.

Data Analyst | EnigmaSoft Technologies - Panjim *Mar 2021 – Feb 2022*

- Developed Power BI reporting for a UK electricity supplier, analyzing weather conditions and electricity demand and building actual-vs-predicted demand dashboards.
- Analyzed historical consumption and demand data to identify trends supporting operational planning, improving forecast-variance visibility for the operations team.
- Prepared and transformed reporting data and presented operational insights through Power BI dashboards and trend analysis; contributed to analytics and chatbot initiatives.

Data Analyst | Sveltetech Technologies - Gurugram *Nov 2020 – Mar 2021*

- Developed and maintained Power BI reports and KPI-based visualizations, supporting refresh scheduling and recurring reporting for business stakeholders.
- Prepared and transformed data for recurring KPI reports, ensuring consistent scheduled refreshes and dashboard availability.

Technical Support Associate | Tech Mahindra - Noida *Nov 2018 – Mar 2020*

- Developed and maintained Power BI reports and KPI-based visualizations while supporting refresh scheduling and recurring reporting.
- Translated business data into KPI-focused Power BI views, laying the foundation for a transition into a dedicated BI/Data Analyst role.

CERTIFICATIONS & EDUCATION

- **Microsoft Certified: Power BI Data Analyst Associate (PL-300)**
- B.Tech - Computer Science & Engineering, Accurate Institute of Management and Technology, Greater Noida (2014–2018)
- Additional: PwC Switzerland – Power BI Job Simulation (Forage)
